

Class	Method	#	Description	Sample Input Data	Expected Output	Actual Output	P/F
Game	isGameOver()	1	HPs of player and opponent are both non-zero	player.hp = 100, opp.hp = 150	return false	return false	P
		2	HPs of player and opponent are both zero	player.hp = 0, opp.hp = 0	return true	return true	P
		3	HP of player is zero and HP opponent is not zero	player.hp = 0, opp.hp = 150	return true	return true	P
		4	HP of player is not zero and HP opponent is zero	player.hp = 100, opp.hp = 0	return true	return true	P
	compareSpeed()	1	Player's speed is higher than opponent	player.spd = 50, opp.spd = 30	return true	return true	P
		2	Player's speed is lower than opponent	player.spd = 30, opp.spd = 50	return false	return false	P
		3	Player's speed is equal to opponent	player.spd = 50, opp.spd = 50	return false	return false	P
	askAction()	1	Player/opponent chooses attack	input: 1	return 1	return 1	P
		2	Player/opponent chooses defend	input: 2	return 2	return 2	P
		3	Player/opponent chooses charge	input: 3	return 3	return 3	P
		4	Player/opponent enters invalid integer	input: 4	ask again	ask again	P
		5	Player/opponent enters float	input: 1.1	runtime error	runtime error	P
		6	Player/opponent enters character	input: 'a'	runtime error	runtime error	P
		6	Player/opponent enters string	input: "attack"	runtime error	runtime error	P
Player	loseHp()	1	Player's HP is higher than the input	player.hp = 50, player.loseHp(20)	player.hp = 30	player.hp = 30	P
		2	Player's HP is equal to the input	player.hp = 50, player.loseHp(50)	player.hp = 0	player.hp = 0	P
		3	Player's HP is lower than the input	player.hp = 50, player.loseHp(60)	player.hp = 0	player.hp = 0	P
	gainAtk()	1	Player's attack is higher than the input	player.atk = 50, player.gainAtk(20)	player.atk = 70	player.atk = 70	P
		2	Player's attack is equal to the input	player.atk = 50, player.gainAtk(50)	player.atk = 100	player.atk = 100	P
		3	Player's attack is lower than the input	player.atk = 50, player.gainAtk(60)	player.atk = 110	player.atk = 110	P
	loseAtk()	1	Player's attack is higher than the input	player.atk = 50, player.loseAtk(20)	player.atk = 30	player.atk = 30	P
		2	Player's attack is equal to the input	player.atk = 50, player.loseAtk(50)	player.atk = 0	player.atk = 0	P
		3	Player's attack is lower than the input	player.atk = 50, player.loseAtk(60)	player.atk = 0	player.atk = 0	P
	gainDef()	1	Player's defense is higher than the input	player.def = 50, player.gainDef(20)	player.def = 70	player.def = 70	P
		2	Player's defense is equal to the input	player.def = 50, player.gainDef(50)	player.def = 100	player.def = 100	P
		3	Player's defense is lower than the input	player.def = 50, player.gainDef(60)	player.def = 110	player.def = 110	P
	loseDef()	1	Player's defense is higher than the input	player.def = 50, player.loseDef(20)	player.def = 30	player.def = 30	P
		2	Player's defense is equal to the input	player.def = 50, player.loseDef(50)	player.def = 0	player.def = 0	P
		3	Player's defense is lower than the input	player.def = 50, player.loseDef(60)	player.def = 0	player.def = 0	P
	gainSpd()	1	Player's speed is higher than the input	player.spd = 50, player.gainSpd(20)	player.spd = 70	player.spd = 70	P
		2	Player's speed is equal to the input	player.spd = 50, player.gainSpd(50)	player.spd = 100	player.spd = 100	P
		3	Player's speed is lower than the input	player.spd = 50, player.gainSpd(60)	player.spd = 110	player.spd = 110	P
	loseSpd()	1	Player's speed is higher than the input	player.spd = 50, player.loseSpd(20)	player.spd = 30	player.spd = 30	P
		2	Player's speed is equal to the input	player.spd = 50, player.loseSpd(50)	player.spd = 0	player.spd = 0	P
		3	Player's speed is lower than the input	player.spd = 50, player.loseSpd(60)	player.spd = 0	player.spd = 0	P
	attack()	1	Normal attack, defense lower than attack	player.atk = 50, opp.def = 20, opp.hp = 100	opp.hp = 70	opp.hp = 70	P
		2	Normal attack, defense higher than attack	player.atk = 50, opp.def = 70, opp.hp = 100	opp.hp = 100	opp.hp = 100	P
		3	Opponent defends, defense lower than attack	player.atk = 50, opp.def = 20, opp.hp = 100	opp.hp = 95	opp.hp = 95	P
		4	Opponent defends, defense higher than attack	player.atk = 50, opp.def = 30, opp.hp = 100	opp.hp = 100	opp.hp = 100	P
	charge()	1	Attack is not zero and currently not charged	player.atk = 30, player.isAttackCharged = false	player.atk = 90, player.isNextCharged = true	player.atk = 90, player.isNextCharged = true	P
		2	Attack is not zero and already charged	player.atk = 30, player.isAttackCharged = true	player.atk = 30, player.isNextCharged = false	player.atk = 30, player.isNextCharged = false	P
		3	Attack is zero and currently not charged	player.atk = 0, player.isAttackCharged = false	player.atk = 0, player.isNextCharged = true	player.atk = 0, player.isNextCharged = true	P
		4	Attack is zero and already charged	player.atk = 0, player.isAttackCharged = true	player.atk = 0, player.isNextCharged = false	player.atk = 0, player.isNextCharged = false	P
